

Signature Series Product Information

COMPLETE CONNECT eConnect Extensions

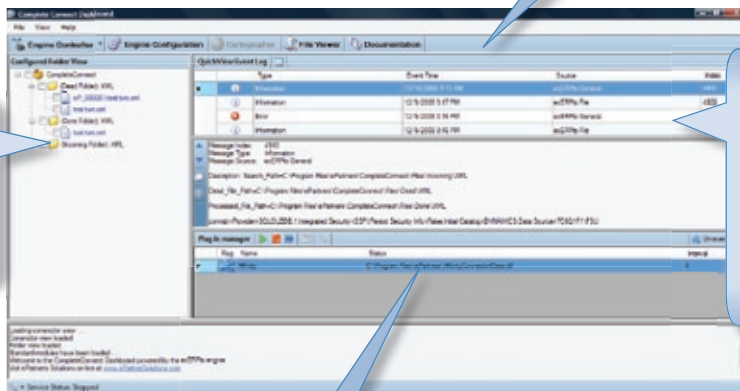

Signature Series' **CompleteConnect** is a full service application enabling easy management of multiple types of Signature Series, ePartnersMD and CompleteConnect enabled solutions within the environment. The dashboard puts all the necessary controls at your fingertips whilst the service processes data in real time, quickly and efficiently. The user can view events, perform drag and drop file management and manage individual integrations from within the dashboard application.

Menu Bar

One click access to the engine controller, engine configuration, file viewer, documentation and the new Cartographer; which enables the definition of relationships between data sources simplifying the integration process and allows the user to define most integrations without the need of custom software development.

Folder Views

This pane displays the contents of configured folders. The user is able to manipulate the files within it to open and move files.

Quick View Event Log

The product keeps a record of errors in the system event log and this view allows the user to see the top 250 records. The user can also receive notifications of errors via SMTP mail.

Connectors and Plug-In View

Allows the user to start, stop and configure components (connectors) containing custom business logic.
